Spiral Fractal 3–Don Anderson

Medium–Stainless steel & powder coated steel

\$8,750

Anderson used the spiral shape to show energy and continuous motion. He contrasted the organic spiral shape by placing it on a geometrically shaped base. Notice the color of the spiral and the color of the base and how the spiral reflects light while the base does not reflect much. Now look at the brushed texture on the spiral and the smooth texture on the base. The use of different colors, different reflective surfaces, and different textures are all ways in which the artist shows contrasts. What kind of contrast would you use if you were making a sculpture?
